

2-digit numbers in normal form

Write the numbers in normal form.

Example: $75 = 7 \times 10 + 5 \times 1$

1) $\underline{\quad} 4 \times 10 + 2 \times 1$

2) $\underline{\quad} 8 \times 10 + 5 \times 1$

3) $\underline{\quad} 3 \times 10 + 9 \times 1$

4) $\underline{\quad} 6 \times 10 + 1 \times 1$

5) $\underline{\quad} 5 \times 10 + 7 \times 1$

6) $\underline{\quad} 2 \times 10 + 4 \times 1$

7) $\underline{\quad} 9 \times 10 + 8 \times 1$

8) $\underline{\quad} 1 \times 10 + 6 \times 1$

9) $\underline{\quad} 7 \times 10 + 3 \times 1$

10) $\underline{\quad} 5 \times 10 + 3 \times 1$

11) $\underline{\quad} 1 \times 10 + 9 \times 1$

12) $\underline{\quad} 8 \times 10 + 2 \times 1$

13) $\underline{\quad} 4 \times 10 + 7 \times 1$

14) $\underline{\quad} 9 \times 10 + 4 \times 1$

15) $\underline{\quad} 3 \times 10 + 6 \times 1$

16) $\underline{\quad} 7 \times 10 + 5 \times 1$

17) $\underline{\quad} 2 \times 10 + 8 \times 1$

18) $\underline{\quad} 6 \times 10 + 0 \times 1$
